Hi Eric,

Hope you are enjoying your summer.

Just wanted to make sure that all the ground work going on at Pine View Estates is ok. They removed all the vegetation on the side hill and are doing groundwork I assume for the septic and leach lines. I have concerns regarding the elevation and that it is so close to the drainage which is already being impacted by the current system. Is there a way to get funding to run a test on the well for the Tribal residence located down from the project?

I also would like your thoughts on the information bellow. The Tribe has plans to build a small casino and would like to possibly put a system like this in the facility. Thanks Marie

Dear Joe,

Bill has been forwarding your emails to me to keep me up to date.

We have updated our web page [www.equaris.com](http://www.equaris.com) with our latest PowerPoint Presentation. Go to the Tool Bar and click on Additional Information and the go down and click on Corporate History.

You can direct the Panama engineers to go there where they will see the installation in Belize and the Robert Redford Natural Resources Defense Council Office Building in Santa Monica, CA. The NRDC building was voted the "Greenest Building" in the US under the LEED Green Building Program. Those two projects will not even hold a candle to your project with all of the new features that we are now offering.
